## Executive Summary

<b>Appointment</b>	<p>Curtins were instructed by Regal London to undertake a combined Phase 1 Preliminary Risk Assessment (PRA) at 390-406 High Rd, Wembley HA9 6AR. This report has been undertaken in support of the proposed demolition of the existing buildings onsite to facilitate the development of two new student accommodation blocks with associated infrastructure and hardstanding. No private gardens are proposed as part of the development.</p>
<b>Current Site Status</b>	<p>The development site is located to the North of Harrow Road (A404) in Wembley. The approximate area of the site is 0.4 hectares (Ha). The site comprises an approximately rectangular shape, which is currently occupied by two leaseholds separated by a party wall between 390-406 and 402. Commercial businesses occupy the ground floor with further commercial above. The site exhibits a flat topography.</p>
<b>Site History</b>	<p>In 1864 the development site sits within an undeveloped parcel of land forming part of a farm named 'Wembleyhill Farm'. From the 1940s mapping until 1974 part of the site is an active 'Depot' and from 1958 mapping until 1974 the site contains a cross-boundary garage. From 1983 the site exhibits present day configuration.</p> <p>The surrounding land around the site shows no significant development until 1914 where the railway land to the immediate north of the site is constructed and residential dwellings replace the former vacant greenfield/farmland. In 1957 a depot is shown to the east of the site and in 1968 an electrical substation appears 110m southwest.</p>
<b>Geology</b>	<p>The British Geological Society records indicate that the site is underlain by the London Clay Formation with no superficial deposits recorded onsite.</p>
<b>Hydrogeology</b>	<p>The underlying London Clay is listed as Unproductive Strata. The site is not situated within an Environment Agency defined Source Protection Zone (SPZ). There are no active groundwater abstraction points within 500m of the site.</p>
<b>Hydrology</b>	<p>There are no surface water features within 250m of the subject site</p>
<b>Initial Ground Contamination Assessment</b>	<p>The potential risk to receptors such as controlled waters and future site users of the development are generally assessed as <b>LOW to MODERATE</b>, with the requirement for a Generic Quantitative Risk Assessment (GQRA) to further determine the risk to future site users.</p>
<b>Recommendations</b>	<p>It is recommended that the GQRA are conducted as part of a ground investigation in support of the engineering design of the proposed development.</p> <p>In summary, the following recommendations are made:</p> <ul style="list-style-type: none"> <li>• Undertake an intrusive ground investigation to support civil and structural design;</li> <li>• Undertake GQRA for human health and ground gases.</li> </ul>

---

## 1.0 Introduction

### 1.1 Project Background

Curtins were instructed by Regal London to undertake a Phase 1 Preliminary Risk Assessment (PRA) at 390-406 High Rd, Wembley HA9 6AR. The site is centred on national Grid Reference 518610,185280.

This report has been undertaken in support of the proposed demolition of the existing buildings onsite to facilitate the development of two new student accommodation blocks with associated infrastructure and hardstanding. No private gardens are proposed as part of the development.

The proposed development plans (at the time of writing) are presented in Appendix A.

### 1.2 Scope

The Preliminary Risk Assessment (PRA) is intended to provide an overview of the geo-environmental setting of the site. The report will develop a working preliminary conceptual ground model for the site as well as present an initial assessment of geo-environmental risks that could be presented to the future development of the site.

Specifically, the PRA provides an initial assessment of the site with regard to:

- a) Potential contamination of the site from historical and/or current use.
- b) The potential impact on the wider environment from historical and/or current use.
- c) The potential impact from surrounding land uses and other environmental factors.
- d) Potential risks associated with geological features such as faulting, mineral extraction, mining and land instability.
- e) The location of apparent sub-surface structures that may affect the proposed redevelopment.
- f) The location of above-surface features that may affect the proposed redevelopment.

The PRA is a desk-based exercise written using information provided from a desk based environmental study and any information made available to Curtins from the Client. The PRA can be utilised to inform the requirement for, and extent of, any future intrusive investigation work.

## 2.0 Desk Study

This desk study section has been undertaken using the following data sources and publicly available information;

- Envirocheck Report (1);
- British Geological Survey (2), (3);
- Environment Agency Data (4);
- UK Historical Landfill Data (5);

Copies of reports and any other supporting information are presented in Appendix B.

### 2.1 Current Setting

The development site is located to the North of Harrow Road (A404) in Wembley. The approximate area of the site is 0.14 hectares (Ha). The site comprises an approximately rectangular shaped, which is currently occupied by two leaseholds separated by a party wall between 390-406 and 402. Commercial businesses occupy the ground floor with further commercial above. The site exhibits a flat topography.

The National Grid Reference for the centre of the site is 518610, 185280. The site location is presented in Figure 2.1 below, and the site boundary outlined in red, respectively.

**Figure 2.1** Site Location (Google Satellite Imaging, 2021)

## 2.2 Surrounding Land Use

The immediate surrounding land use to the development site is highlighted in Table 2.2 below.

**Table 2.2** *Surrounding Area*

<b>Surrounding Area</b>	N	Area of parking and railway tracks running east-west relating to Wembley Stadium station beyond.
	E	A boxing gym and beyond that multi-storey residential dwelling.
	S	A404 High Road, Wembley / Harrow Road and an active demolition/ construction site.
	W	Commercial shops and restaurants running parallel to Harrow Road.

### 3.0 Site History

A review of the available historical mapping (1) and freely available information for the site and surrounding area (<150m) has been undertaken. The historical development of the site and surroundings are presented below in table 3.0 and 3.10 respectively.

**Table 3.0** *Previous Site Uses and Potential Sources of Contamination*

Date	Description	Potential Sources of Contamination
1864s to 1940s	From earliest available mapping, the development site comprises a farm named 'Wembleyhill Farm' with the development site sitting within a parcel of undeveloped vacant land. In 1914 the site now sits within an undeveloped parcel of land between a railway cutting to the north and Harrow Road Tramway.	N/A
1940s to 1970s	In 1946s aerial photography the site shows evidence of recent demolition works on the western section and active use as a depot in the eastern portion. In 1958 mapping the majority of the site is labelled as a depot and a cross-boundary garage is present on the eastern boundary of the site.	Uncontrolled deposition of Made Ground associated with development and demolition  Potential leakage and spillage of hydrocarbons or volatile organic compounds associated with Depot works and garage use.
1970s to present day	In 1974 mapping the depot is no longer present onsite and the entire site appears vacant. In 1983 mapping the site exhibits present day configuration with buildings now constructed.	N/A

**Table 3.1** *Surrounding Land Uses and Potential Sources of Contamination*

Date	Description	Potential Sources of Contamination
1864s to 1950s	In 1864 mapping the land surrounding the site consists of farmland, empty fields, orchards and farm buildings. In 1896 mapping there is a smithy 150m to the east and Sudbury and Wembley Station 250m offsite to the west. In 1914 the surrounding land has shown more residential developments to the northeast and southwest. A large railway cutting lies directly north of the site exhibiting the strike of the present-day railway line.	Controlled deposition of Made Ground associated with development from the railway embankment.
1950s to Present day	In 1957-1958 mapping 30m offsite to the east is a 'depot' with the land immediately north to circa 100m north is entirely railway land. In addition, the cross-boundary garage is present immediately east of the site.	Potential leakage and spillage of hydrocarbons or volatile organic compounds associated with Depot works and garage use.

Limited information is available relating to the site history before the 1870s when the first ordnance survey maps were produced. Potential sources of on-site and off-site contamination are further discussed in Section 5.0.

### 3.1 Preliminary Unexploded Ordnance (UXO) Risk Assessment

The likelihood of UXO being encountered on a development site is influenced by a number of factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. In order to determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry. The following assessment is considered to comprise a preliminary risk assessment based on available historical mapping and Bombsight records (6).

With reference to the development site and surrounding area pre-WWII was shown on maps to comprise residential/commercial properties, however, the site's location within wider London and adjacent to a railway line is considered to comprise secondary bombing targets.

The historical mapping (as detailed in Section 3.0) and Bombsight maps, highlight evidence of bombing 60m to the south off Cecil Avenue, 80m north off Dennis Avenue, 80m and 150m east on Ecclestone Place, 130m and 190m northeast on Mostyn Avenue. However no bombs were recorded on-site.

Notwithstanding, a Detailed Unexploded Ordnance Risk Assessment has been commissioned for the development site to determine potential UXO risk and is provided in Appendix B.

The detailed UXO risk assessment for the development site has been determined a Low risk. In light of this low risk, the following risk mitigation measures are recommended to support the proposed works at High Road, Wembley:

#### **All Works**

- UXO Risk Management Plan
- Site Specific UXO Awareness Briefings to all personnel conducting intrusive works.

It is recommended that a copy of the detailed UXO risk assessment is retained within the site Health and Safety file or Construction Phase Plan.

## 4.0 Geology, Hydrogeology and Hydrology

### 4.1 Geology

A study of the Envirocheck report (1) and British Geological Survey (BGS) 1:50,000 mapping records (Solid and Drift Editions) (3) indicates the following geological succession underlying the site:

**Table 4.1** *Geological/Hydrogeological Succession*

Geology	Associated Hydrogeological Classification
<b>Made Ground deposits</b> are not recorded on geological mapping, however, given two phases of development on-site, it is likely such deposits are present potentially deeper than 1m bgl.	N/A
<b>Superficial deposits</b> are not recorded on geological mapping.	N/A
<b>Bedrock deposits</b> are recorded as the <b>London Clay Formation</b>	Unproductive Strata <sup>1</sup>

Notes:

1. These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.

#### 4.1.1 Historical BGS Borehole Records

A review of the available online BGS borehole records did not record any historical boreholes on-site, the closest borehole record is located 45m southwest offsite. A summary of this historical borehole 45m south-west of the site BGS ref. TQ18NE161 is summarised below.

- Made Ground – 1.70m bgl;
- Brown CLAY – 10.60m bgl;
- Blue CLAY – 12.10m bgl Groundwater was encountered at 7.00m bgl.

### 4.2 Hydrogeology

The site is not situated within an Environment Agency defined Source Protection Zone (SPZ). There are no active groundwater abstraction points within 500m of the site.

### 4.3 Hydrology

There are no surface water features within 250m of the subject site. There are no discharge consents for the site and no pollution incidents to controlled waters have been recorded on-site.

#### 4.4 Flood Risk

The site is located within an Environment Agency designated Flood Risk Zone 1 (with low probability of flooding from rivers or the sea).

#### 4.5 Mining or Mineral Extraction

The site is not recorded to be within an area affected by coal mining or non-coal mining.

#### 4.6 Natural Ground Subsidence

The Envirocheck report confirms that there is a very low to low hazard from the following ground stability hazards on site: collapsible, compressible, dissolution, landslide, running sand. The report confirms that there is a moderate risk from shrinking and swelling clays.

#### 4.7 Ground Gas and Radon

There are no recorded historical or other landfill sites within 250 m of the site. In addition, a review of available historical maps did not indicate the presence of large, infilled features (e.g., surface excavations etc) which could provide a potential source of ground gas.

The Envirocheck report confirms that the property is in a low probability radon area where less than 1% of properties are estimated to be at or above the radon action level. On this basis, no radon protection measures are required for new dwellings.

#### 4.8 Regulatory Data

Information in the Envirocheck Report (Appendix B), relating to various regulatory controls has been reviewed, with a summary presented below in Table 4.8.

**Table 4.8** *Regulatory information within 250m of the site*

Regulatory Data	Distance from Site	Details
Historical Landfill Sites	>250m	None recorded within 250m of the subject site.
Local Authority Recorded Landfill Sites	>250m	None recorded within 250m of the subject site
Local Authority Pollution Prevention and Controls	Onsite	A dry cleaner was present at 404 High Road, Wembley, HA9 6AL from June 2007 until present day. A PPC was also in affect from November 1999 for a BP garage under petrol filling station at 157m East, this has since been revoked. Given that these under Local Authority control and subject to regulation, considered unlikely chemicals utilised as part

Regulatory Data	Distance from Site	Details
		of the cleaning have had the potential to migrate to the subsurface.
Registered Waste Transfer Sites	>250m	None recorded within 250m of the subject site.
Registered Waste Treatment or Disposal Sites	>250m	None recorded within 250m of the subject site.
Licensed Waste Management Facilities	>250m	None recorded within 250m of the subject site.
Fuel Station Entries	152m East	Wembley Service Station, Status: Obsolete
Registered Radioactive Substances	>250m	None recorded within 250m of the subject site.

#### 4.9 Contemporary Trade Directory Entries

There are two contemporary trade directory entries registered for the site. Comet Group PLC, an electrical goods sales, manufacture and wholesaler with an inactive status. The second is a printers named Sivani Printers and is also inactive.

#### 4.10 Planning Portal

A review of London Borough of Brent online planning portal was undertaken to determine any potential environmentally pertinent information on-site or within the surrounding area, in relation to this assessment. A recent planning application (15/3161) dated 23/12/2015 for the development of a three-storey secondary school building (located 150m south of the site), as part of this application a ground investigation report was submitted.

##### Technical Note – Ramboll Environ (February 2016)

The ground investigation comprised a series of cable percussive boreholes to 30.00m bgl, trial pits, hand dug excavation pits and driven tube sampling.

The ground conditions were not summarised within the report. Review of borehole logs within the appendices highlight Made Ground in several locations to depths of 0.70m to 1.60m bgl and consisted mainly of brown sandy gravely CLAY with flint, brick, ash, bituminous bound material, ceramic and concrete. London Clay Formation was present thereafter consisting of firm brown mottled blue sandy CLAY

Groundwater was encountered within the Made Ground deposits and London Clay (where response zones crossed strata boundary's) at 0.15m bgl to 5.20m bgl.

---

Visual or olfactory indicators of solid phase contamination were recorded within soils during the ground investigation with Black bituminous bound material and evidence of 'membrane' type materials, ash was also noted in several locations within Made Ground.

The results of the environmental testing and comparison against generic assessment criteria for residential land use without home-grown produce criteria recorded exceedances of PAHs including; Benzo(a)pyrene, Naphthalene, Chrysene and dibenzo(a,h)anthracene in the Made Ground likely reflective of solid phase contamination identified.

No Asbestos was encountered within Ramboll's 2015 ground investigation.

The gas regime of the site was classified as a Characteristic Situation 1 where no ground gas protection measures are required, however, the site in the southern portion of the site was classified as a Characteristic Situation 2.

## 5.0 Preliminary Conceptual Site Model & Qualitative Risk Assessment

The Conceptual Site Model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table within this section.

The CSM details the source-pathway-receptor linkages or potential contaminant linkages (PCLs) that have been identified for the site. The QRA details the associated level of risk relating to these PCLs.

The CSM and QRA concern the major risks to human health and controlled waters with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in Section 5.1 below.

The QRA follows the framework outlined within CIRIA C552 which is summarised within Appendix C.

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PCL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

### 5.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but none-the-less can be of critical importance to the onward development of the site.

- The risk presented by **Unexploded Ordnance** is discussed in Section 3.1.
- The risk presented by **Radon** is discussed and assessed in Section 4.7

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations, 2015 which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works on site will be undertaken in compliance with these requirements and therefore construction workers involved in the building works at the site have been discounted as a human receptor in the conceptual site model.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- In order for a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to negligible risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made in order to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Action
Source	Pathway(s)	Receptor(s)	Consequence (Potential Severity)	Likelihood of Occurrence	Risk Rating	
<p><b>On-site sources of potential contamination:</b></p> <p>Based on initial reporting and provided preliminary reporting the primary anticipated source of contamination on site is uncontrolled deposition of Made Ground during phases of development and demolition.</p> <p>Spillages, leakages and pollution from plant associated with demolition works and the sites historical use as a Depot and a Garage.</p> <p><i>Potential contaminants of concern associated with the above sources include a range of organic and inorganic compounds including heavy metals, petrol and diesel range hydrocarbons, poly-cyclic aromatic hydrocarbons (PAHs), and asbestos.</i></p>	<p><b>Inhalation of vapours</b></p> <p>Inhalation of dust/fibres where areas of soft landscaping are proposed.</p>	<p><b>End users of site</b></p> <p>Residents (students), site staff, visitors and trespassers.</p>	<p><b>Medium</b></p> <p>Chronic health risk</p>	<p><b>Likely</b></p> <p>Substantial thicknesses of Made Ground deposits related to historical phases of construction and demolition are likely to cover parts of the site. If and where any contamination is present on site it is likely to be either; present as minor inclusions, comprise solid phase material (i.e. ash and clinker), a localised source area or present within the near surface soils. Any potential spillages of hydrocarbons during demolition/construction and historical depot/garage related works are likely to be localised, however, there is a risk it may be at a scale which could exceed residential screening criteria.</p> <p>Given the proposed site development is to comprise a residential end use and areas of soft landscaping have not been ruled out. It is considered likely that the solid phase contaminants within the Made Ground would present a risk to future site users at the ground floor in areas of soft landscaping through inhalation of vapours.</p>	<b>Moderate</b>	<b>GQRA as part of ground investigation.</b>
<p>Spillages, leakages and pollution from plant associated with demolition works and the sites historical use as a Depot and a Garage.</p> <p><i>Potential contaminants of concern associated with the above sources include a range of organic and inorganic compounds including heavy metals, petrol and diesel range hydrocarbons, poly-cyclic aromatic hydrocarbons (PAHs), and asbestos.</i></p>	<p><b>Vertical and lateral migration through the Made Ground</b></p> <p>May occur due to service corridors or natural variations in London Clay Deposits.</p>	<p><b>Controlled waters (Groundwater and Surface Waters)</b></p> <p>Site underlain by unproductive strata (London Clay Formation).</p> <p>No surface water features within 250m of the subject site.</p>	<p><b>Mild</b></p> <p>Pollution of non-sensitive water resources</p>	<p><b>Unlikely</b></p> <p>Substantial thicknesses of Made Ground deposits related to historical phases of construction and demolition are likely to cover parts of the site. If and where any contamination is present on site it is likely to be either; present as minor inclusions, comprise solid phase material (i.e. ash and clinker), a localised source area or present within the near surface soils. Any potential spillages of hydrocarbons during demolition works are likely to be localised and retained in the near surface. The central and eastern portion of the site poses risk of localised hydrocarbons and miscellaneous contaminants from leaks and spillages from the sites former use as a Depot and a Garage.</p> <p>Controlled waters are not sensitive below this site with the London Clay having low permeability and having negligible significance on local water supply or river base flow. The site is not located near any surface water features and is not located within 500m of a Source Protection Zone 1 or groundwater abstraction.</p> <p>Based on this the current development site is considered to present a low risk to controlled waters owing to the unproductive low permeability bedrock across the entire site.</p>	<b>LOW</b>	<b>Confirm no gross or mobile phase contamination as part of a ground investigation</b>
<p><b>Off-site sources of potential contamination:</b></p> <p>Spillages, leakages and pollution associated railway tracks/land and embankments offsite to the north, and miscellaneous 'Depots' and 'Works'</p> <p><i>Potential contaminants of concern associated with the above sources include a range of organic and inorganic compounds including heavy metals, petrol and diesel range hydrocarbons, poly-cyclic aromatic hydrocarbons (PAHs), Polychlorinated biphenyls (PCBs) and asbestos.</i></p>	<p><b>Horizontal migration through the Made Ground</b></p> <p>followed by</p> <p><b>Inhalation of vapours</b></p>	<p><b>End users of site</b></p> <p>Residents (students), site staff, visitors and trespassers.</p>	<p><b>Medium</b></p> <p>Chronic health risk</p>	<p><b>Unlikely</b></p> <p>The immediate surrounding off-site land to the north currently and historically has comprised of railway land with cuttings/embankments and railway tracks. As such there is potential for contaminants to be present within the sub-surface directly adjacent to the site and within potentially imported material for the railway embankment immediately north of the site. There have been historical works offsite to the east which has potential to contaminate ground in proximity.</p> <p>Moreover, environmental testing carried out for a new secondary school offsite to the south of the subject site recorded exceedances for PAHs within the Made Ground.</p> <p>Consequently, it is considered unlikely that gross or mobile phase contamination could migrate onto site due to London Clays low permeability which renders the risk of migration from offsite sources unlikely and any such occurrences would be limited to off-site areas only.</p>	<b>LOW</b>	<b>Confirm no gross or mobile phase contamination as part of a ground investigation</b>

Conceptual Site Model			Qualitative Risk Assessment			Action
Source	Pathway(s)	Receptor(s)	Consequence (Potential Severity)	Likelihood of Occurrence	Risk Rating	
<p><b>On- and off-site sources of potential ground gas:</b></p> <p>Uncontrolled deposition of Made Ground on-site through development and demolishment of buildings.</p> <p>Spillages, leakages and pollution associated with local industry and plant associated with demolition works.</p> <p><i>Potential contaminants of concern associated with the above sources include a range of organic and inorganic compounds including heavy metals, petrol and diesel range hydrocarbons, poly-cyclic aromatic hydrocarbons (PAHs).</i></p>	<p><b>Vertical and horizontal migration through existing service corridors and Made Ground.</b></p>	<p><b>End users of site</b></p> <p>Residents, visitors and trespassers</p>	<p><b>Severe</b></p> <p>Acute health risk, e.g. asphyxiation or risk from explosion</p>	<p><b>Low Likelihood</b></p> <p>Made Ground is anticipated to exist on parts of the site with a phase a demolition and previous land use of a Depot and Garage. In the absence of knowing the presence, thickness, lateral extent and chemical composition of onsite made ground the risk of ground gas from onsite Made Ground cannot be ruled out.</p> <p>Made Ground has previously been identified to depths of circa 1.60m bgl near the site boundary; the ground gas generating potential off-site is considered low when coupled with (London Clay Formation) directly below the site, low proximity to landfills and/or infilled ground and limited phases of development onsite.</p> <p>On this basis, it is considered the development site has a 'very low to low' gassing potential in line with BS8576</p> <p>Notwithstanding this, it is recommended that ground gas monitoring is undertaken as part of a ground investigation to inform ground gas risk assessment for the site.</p>	<p><b>Low to Moderate</b></p>	<p><b>Confirm ground gas concentrations as part of the ground investigation</b></p>

## 6.0 Conclusions & Recommendations

The qualitative risk assessment (QRA) determined an overall Low to Moderate level of risk to future site users, and ground gases associated with the proposed development. The QRA concluded that further requirements comprising a generic quantitative risk assessment (GQRA) are required to determine the potential contamination risk on-site and to confirm ground conditions.

It is recommended that the GQRA are conducted as part of a ground investigation in support of the engineering design of the proposed development an outline scope for which is detailed in the section hereafter.

In summary, the following recommendations are made:

- Undertake an intrusive ground investigation to support civil and structural design;
- Undertake GQRA for human health and ground gases.

It is further recommended that this work is completed in advance of any development works taking place.

### 6.1 Outline Scope of Works for Ground Investigation

Potential sources of site-wide contamination have been identified on site as part of the Preliminary Site Assessment. On this basis, a non-targeted sampling strategy is recommended to obtain representative coverage of the site and to facilitate 'check testing' of the various materials arising from the ground.

The sampling strategy can be co-ordinated with a geotechnical sampling strategy (targeting of proposed building footprints and boundary conditions) but should allow adequate coverage of the site in line with good practice.

It is envisaged that the ground investigation will comprise the following, all undertaken under the supervision of a suitably qualified engineer:

- Advancement of sonic drill boreholes to depths of up to 30m and 35m bgl with in-situ (SPT) to determine deeper ground conditions and potential piled foundation;
- Advancement of window sample boreholes to depths of up to 5.0m bgl with in-situ testing (SPT) to inform shallow ground conditions and inform the GQRA;
- Advancement of in-situ CBR tests (using TRL Probe) to depths up to 0.80m bgl to inform preliminary roadway/pavement design;
- Recovery of soil and groundwater samples to inform geotechnical and environmental assessments;
- Construction of six (shallow and deep) combined gas and groundwater monitoring wells;
- Gas and groundwater monitoring.

---

## 6.2 Contaminants of Concern

It is recommended that screening of the materials arising from the ground is undertaken to confirm their suitability for retention and/or re-use on site. Potential contaminants of concern (CoC) associated with the on-site and off-site sources identified include:

- Polycyclic aromatic hydrocarbons (PAHs);
- Aliphatic and aromatic hydrocarbons present within fuel oils;
- Volatile Organic Compounds;
- Inorganic compounds including toxic metals, non-metals and metalloids; and,
- Asbestos.

Potential contaminants associated with the air-borne dust/particulates and vapours include, but are not limited to: asbestos, polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential on-site contaminants of concern.

The potential for other CoC's to exist that are not listed above is considered unlikely and shall be at the discretion of the supervising Engineer.

The potential for off-site sources of free product or mobile contaminants within the sub-surface environment is considered unlikely and is considered to be accounted for by the contaminants of concern detailed above.

#### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

#### Copyright Notice

#### Natural England Copyright Notice

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

#### Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

#### Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

#### Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

#### Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

#### Natural Resources Wales Copyright Notice

Contains Natural Resources Wales information © Natural Resources Wales and Database Right. All rights Reserved. Contains Ordnance Survey Data. Ordnance Survey Licence number 100019741. The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Historical Aerial Photography

Published 1946

Source map scale - 1:1,250

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was re-checked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

### Additional SIMs

Published 1983

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

### Large-Scale National Grid Data

Published 1991

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
